ACTION FRAMEWORK

Training strategy

- Since majority (91%) are beginners, there's a need to start from the basics. Let's prioritize foundational cloud classes.
- In the era of multiple certifications and zero experience, let us introduce hands-on labs as we begin our foundational cloud classes. A lot of people learn by doing and the visual experience will help them learn faster.
- In as much as we have a lot of beginners, we also have individuals who chose

Outreach & Growth

- So far, the analysis has revealed that majority of our students are from the School of Computing (SOC) and a lot of faculties are underrepresented. In fact, some are not represented, so, there's a need to target faculties that have low-to-no representation and work to have more of them represented.
- Our respondents have decided the aspect of tech that interests them, so we could start from there and use it as event themes. Although these Cloud interests are broad and pregnant, we could work on decomposing them and

Community Structure

- We can have study buddies as a form of accountability partner for our community members so that no one gets left behind. With that, they can network in the community whilst learning.
- We could encourage collaboration in the community through group projects or lab sessions.
- We could work on a learning roadmap, if we think the one from AWS still needs to be broken down into bits.
- Since there's an AWS Academy in FUTA and we're
